ABSTRACT

The Running Start program was created by the Washington State Legislature in 1990 to allow qualified 11th and 12th grade high school students to take college-level courses at community and technical colleges. In fall 1994, 5,334 high school students were enrolled in college classes through the program, representing about 4% of the total high school juniors and seniors in the state. The colleges are reimbursed by K-12 districts at a rate of \$74 per credit in academic and \$96 per credit in vocational programs. The fall 1994 Running Start students had the following characteristics: (1) 66% of the participants were attending college full-time; (2) 61% were female and 12% were students of color; (3) 48% were working part-time while attending, while 2% were working full-time; (4) 90% were taking academic classes; (5) 1% were disabled; (6) the average grade point average of program students was approximately 2.8, approximately the same as the average of regular college freshmen; and (7) low-income students appear to be less likely than higher income students to participate in the program, an issue which is being addressed by the provision of assistance for books and fees by two-year colleges. Recommendations by the Legislature to improve the program include defining 5 quarter or 3 semester credits as equivalent to 1 high school credit and providing financial assistance to participating high schools. Tables of student characteristics and numbers of students by high school district for 1993-94 are included. (TGI)

Smart Investment-Executive Summary	1
1993-94 Progress Report	3
Enrollment and Student Characteristics	6
University of Washington Statistics	7

Running Start students represent about 2 percent of the total number of full-time juniors and seniors in Washington public high schools.

By allowing students to earn high school and college credits simultaneously, Running Start has reduced the amount of time they have to spend in school and has held down college costs for students and their families.

To preserve the college environment for adults while accommodating the younger students, most colleges limit the number of Running Start students who may take any one class.

RUNNING START

A progress report from the State Board for Community and Technical Colleges

December 1994

Background

The Running Start program was created by the 1990 Legislature to expand educational options for public school students. Running Start allows 11th and 12th grade high school students to take college-level courses at the 32 community and technical colleges, for which they can earn both high school and college credits.

The 1994 Legislature expanded Running Start to give several public four-year universities the option to offer the program. The program now includes Washington State University at Pullman, Eastern Washington University at Cheney and Central Washington University at Ellensburg. No existing community or technical college has its main campus in those cities.

The Legislature initiated Running Start with a two-year pilot program from 1990-92. Statewide operation began in 1992-93. In the first full year of statewide operation, about 3,508 high school students enrolled full- or part-time at the community and technical colleges. That number increased to more than 5,000 for the 1993-94 year.

Running Start students represent about 2 percent of the total number of full-time juniors and seniors in Washington public high schools. These students can attend the colleges free of tuition charges. However, they must provide their own transportation, books, and supplies.

The Running Start Option

More than 5,000 high school students around Washington state participated in Running Start in 1993-94. By allowing them to earn high school and college credits simultaneously, Running Start has reduced the amount of time they have to spend in school and has held down college costs for students and their families. Also flexibility in class scheduling has enabled Running Start students to meet other commitments for education, jobs, or family responsibilities.

Students may obtain information about Running Start from their high school counselors or their local college's admissions office. To participate in Running Start at most colleges, students must pass a standardized test to determine whether they have the skills needed to succeed at college.

To preserve the college environment for adults while accommodating the younger students, colleges limit the number of Running Start students who may take any one class. Also, colleges have worked to ensure that their registration procedures do not result in Running Start students displacing adults at community and techni-

State Board for Community
and Technical Colleges

cal colleges. In fact, the enrollment of new Running Start students has enabled colleges to add sections of existing classes, expanding enrollment opportunities for adults as well as Running Start participants.

Who participates in Running Start? Research by the State Board for Community and Technical Colleges indicates that **56 percent of Running Start students attend college full time; 61 percent are female; 12.5 percent are students of color; and 48 percent work part-time while attending college.**

The academic performance of Running Start students—and the support for the program among students and parents—has been very positive. The average grade point of Running Start students is 2.78, about the same as the average of regular community and technical college students. The University of Washington reports that the 284 Running Start students who transferred to the University have an average GPA of 3.13 and are averaging 15 credits per quarter. And **89 percent of all Running Start students surveyed in 1992 said they would participate again.**

Funding for Running Start is designed to compensate colleges for the cost of educating K-12 students. Colleges are being reimbursed about \$74 per credit for academic programs and \$96 per credit for vocational programs by K-12 districts whose students participate in Running Start. The K-12 districts retain 7 percent of those funds for administrative overhead and student counseling.

Ongoing issues in Running Start

The Running Start program represents a major departure from traditional education practices and the program has raised the visibility of several issues related to students' movement between the K-12 and college system.

The main focus of statewide Running Start policy discussions during 1994-95 will be on the way college credits are used to meet students' high school graduation requirements. Currently, students receive one (1) high school credit for completing five quarter-hours or three semester-hours of college coursework. In 1993, the state Board of Education, which sets high school graduation standards, reduced that credit equivalency ratio to three-quarters (0.75) of a credit. However, legislation was enacted during the 1994 session which created a special task force to review the credit equivalency question. The task force has recommended that the current credit equivalency be retained and that additional funding be requested to offset the budgetary impact of the program on local high schools and colleges. The State Board of Education is planning to take action in the spring to implement the recommendation.

Participation of students of color, low-income, and rural students is another concern. While some progress was seen in 1993-94, these groups are not as well-represented in Running Start as those from higher income and white families. A task force of college and K-12 educators is examining options for boosting participation by these students and is considering the extension of college courses in rural areas through telecommunications pilot programs.

Running Start 1993-94 Progress Report

Background

The Running Start program was created by the 1990 Legislature as part of the "Learning by Choice" law, which was designed to expand educational options for public school students. The Running Start portion of the law allows qualified 11th and 12th grade high school students to take college-level courses at community and technical colleges. The 1994 Legislature also designated Eastern, Central, and Washington State Universities as Running Start institutions. Running Start students can earn both high school and college credits for completing classes at the college level.

To initiate the program, the Legislature authorized a two-year pilot program. Five colleges elected to participate during 1990-92 (Everett, Pierce, Skagit Valley, South Puget Sound and Walla Walla community colleges). The pilot program also involved 37 high schools within the colleges' service areas. The pilot program began with 358 students in the first year.

The program began statewide operation in 1992-93, when about 3,500 students enrolled at the community and technical colleges. During fall quarter 1994, 5,334 students enrolled. Students in Running Start represent about four percent of the total number of juniors and seniors (about two percent of the full-time equivalent students) in Washington public high schools.

Running Start Program Elements

Qualified students can attend the state's 32 community and technical colleges and three universities free of tuition charges. However, they must provide their own transportation, books, and supplies.

For the 1994-95 academic year, colleges were reimbursed at uniform statewide rates by the K-12 districts whose students participate in Running Start. Colleges receive about \$74 per credit for academic programs and \$96 per credit for vocational programs. K-12 districts retain seven percent of the funds for administrative overhead and student counseling. During the pilot program, reimbursement rates varied considerably at the different institutions.

By allowing students to obtain high school and college credit simultaneously, Running Start reduces the amount of time students have to spend in school and reduces college costs for students and their families.

Dual credit allows the State of Washington to save up to two full years of funding for each student.

Flexibility in scheduling enables Running Start students to meet other commitments for education, jobs, or family responsibilities.

Running Start represents a challenging option for qualified students who may perform better in a college setting than in a traditional high school.

Characteristics of Running Start Students

Who participates in Running Start? The State Board for Community and Technical Colleges conducted research during fall 1994 to determine the demographic characteristics of Running Start students. Here are selected results of the survey.

- 66 percent of Running Start students attend college full-time, taking an average of about 10 college credits.
- 61 percent are female.
- 12 percent are students of color.
- 48 percent of the Running Start students work part-time while attending college; two percent work full-time.
- 90 percent are taking academic classes.
- One percent are disabled.

Other Program Information

Based upon continued research and surveys of participating community and technical colleges, the following points have emerged.

- The program is very well received by students and parents. In a 1992 survey, 89 percent of Running Start students said they would participate again.
- The average college grade-point average of Running Start students is approximately 2.80, approximately the same as the average of regular college freshmen.
- Low-income students appear less likely than students from higher income families to participate in Running Start. It is likely that some students cannot afford the additional costs of books, supplies, and transportation associated with Running Start. Most two-year colleges are beginning to address this problem by providing assistance for books and fees for low income participants.
- The use of uniform statewide reimbursement rates to colleges that enroll Running Start students in academic and vocational programs has reduced bookkeeping time considerably. Allowing high schools to retain seven percent to cover counseling and other administrative costs has reduced the non-reimbursed costs associated with Running Start participation. This uniform rate has eliminated: small school district funding disputes, bookkeeping

complications, disparities in school district reimbursements, and the initially imposed limitations on the extent of combined high school and Running Start college enrollment.

- The 1994 Legislature created a task force to review how college credit is applied to high school graduation requirements. The task force has recommended that the State Board of Education maintain the definition of five quarter or three semester college credits as equivalent to one high school credit. The task force also unanimously recommended that the Legislature provide financial assistance to high schools whose ability to offer a comprehensive program is impacted due to significant participation in the Running Start program. The task force recognizes the impact on high schools was unintended by the Legislature, but needs to be addressed.
- University of Washington research data show that Running Start students who transfer to the university continue to be very successful when compared to regular entering freshmen students. Running Start students have higher grade point averages and take a higher credit hour load than regular entering freshmen or other transfer students.

Summary and Conclusions

In summary, the Running Start program continues to be an excellent program for qualified students and represents a major departure from traditional educational practices. Parents and students strongly support the program because it expands their educational choices and offers students the opportunity to get a head-start on their higher education. Many students feel that Running Start offers them an educational challenge that they would not receive in the regular high school setting. For educators, the implementation of standard statewide reimbursement rates has been highly successful in simplifying the accounting process and introducing more certainty into the funding process.

The resolution of the credit equivalency issue will provide a response to one of the two major questions that have continued since the beginning of the program. The second major issue, that of adequate funding for the program, remains to be solved. Particular consideration needs to be given by the Legislature to address the counseling and comprehensive program needs of high schools which have been highly impacted by the program.
